Governed Space

Prediction Communication & Reliance

Canonical Definition

Prediction Communication & Reliance Standard (PCRS) defines the governance conditions under which a Governed Prediction may be communicated, represented, interpreted, distributed, contextualized, and relied upon without exceeding what its methodology, Prediction Basis, assumptions, Probability & Uncertainty, feasibility, intended purpose, Predictive Boundary, Prediction Horizon, and applicable governance qualifications legitimately support.

PCRS governs the transition from:

Governed Prediction

to:

Governed Prediction Representation → Governed Interpretation → Governed Reliance

It establishes what a prediction may legitimately communicate, what meaning recipients may reasonably derive from it, what qualifications must remain attached to it, and what degree or type of reliance is justified by its governed state.

PCRS prevents prediction outputs from acquiring stronger authority through communication than they possessed when governed.

Its foundational principle is:

A prediction must not become stronger in communication than it is in methodology.

Core Question

How may a prediction be communicated, interpreted, and relied upon without exceeding what its methodology, uncertainty, feasibility, intended purpose, and governed conditions legitimately support?

Governance Position Within PGA™

PCRS governs the communication-and-reliance transition within the Prediction Lifecycle.

The PGA™ Governance Flow is:

Prediction Object & Purpose → Prediction Methodology → Prediction Basis → Prediction Assumptions → Prediction Formation → Prediction Probability & Uncertainty → Prediction Feasibility → Collective Prediction where applicable → Communication & Reliance → Monitoring & Revision → Outcome & Performance → Prediction Record & Continuity

PCRS receives a Governed Prediction after individual or, where applicable, collective prediction governance has been completed.

Its governance responsibility is not to change the prediction.

Its responsibility is to ensure that the prediction is:

represented accurately; interpreted within its governed meaning; relied upon only to the extent legitimately supported.

Prediction Communication

Prediction Communication is the act or process through which a prediction is made available to another human, organization, system, agent, decision process, platform, or public audience.

Communication may occur through:

reports; dashboards; APIs; alerts; recommendations; market interfaces; automated systems; decision-support systems; public statements; internal briefings; machine-readable outputs.

Communication ≠ Neutral Transmission

The way a prediction is communicated may materially change how it is perceived.

Prediction Representation

Prediction Representation is the form in which the governed prediction is presented.

It may include:

numerical probability; qualitative likelihood; scenario; range; confidence statement; risk category; ranking; recommendation context; visual indicator; machine-readable state.

Representation ≠ Underlying Prediction

A representation is an expression of the prediction.

It must not alter the governed meaning of the underlying predictive object.

Prediction Meaning Preservation

The meaning established through prediction governance should survive communication.

Communication Compression ≠ Permission to Remove Material Meaning

Prediction Object Preservation

The communicated prediction must continue to refer to the governed Prediction Object.

Communication ≠ Permission to Broaden the Prediction Object

Outcome Definition Preservation

The predicted outcome should remain consistent with the outcome originally governed.

Simplified Language ≠ Broader Outcome Claim

Prediction Horizon Preservation

The applicable Prediction Horizon should remain available where material.

Probability Without Horizon ≠ Complete Predictive Meaning

Predictive Boundary Preservation

Material boundaries should remain attached or accessible.

These may include:

geography; jurisdiction; population; organization; system; operational scope; market scope.

Prediction Without Boundary Context ≠ Universally Applicable Prediction

Methodology Context

A recipient should be able to determine, at a level appropriate to use, what methodology underlies the prediction.

PCRS does not require every communication to reproduce the full methodology.

It requires that communication not conceal or contradict the methodological basis relevant to interpretation.

Simplified Communication ≠ Methodology-Free Communication

Prediction Basis Context

Where material to reliance, the character of the Prediction Basis should remain accessible.

Prediction Basis Omission ≠ Prediction Basis Irrelevance

Assumption Context

Material assumptions may need to accompany or remain accessible from the communicated prediction.

Hidden Material Assumption ≠ Legitimate Reliance Condition

Probability Representation

Where a prediction contains probability, communication must preserve its governed meaning under PPUS.

Probability ≠ Certainty

Probability ≠ Confidence

Confidence ≠ Certainty

High Probability ≠ Guaranteed Outcome

Probability Number ≠ Complete Predictive Meaning

Uncertainty Communication

Material uncertainty should not be removed merely to make the prediction easier to communicate.

Uncertainty Omission ≠ Uncertainty Removal

Range Communication

Where prediction meaning depends upon a range, communicating only a point estimate may create false precision.

Point Estimate ≠ Complete Distribution by Default

Conditionality Communication

Predictions dependent upon explicit conditions should preserve those conditions where material.

Conditional Prediction ≠ Unconditional Prediction

Feasibility Communication

Prediction Feasibility should remain distinguishable from Prediction Probability.

Feasible ≠ Probable

Probable ≠ Feasible

Conditionally Feasible ≠ Unconditionally Feasible

Feasibility Restriction ≠ Full Feasibility

Collective Prediction Communication

Where CPGS applies, collective qualifications should survive communication.

These may concern:

source diversity; predictive dependence; aggregation methodology; influence concentration; representativeness; collective legitimacy.

Collective Prediction ≠ Population Belief by Default

Consensus ≠ Independent Consensus by Default

Market-Implied Probability ≠ Population Belief

Prediction Qualification

A Prediction Qualification is a material condition, limitation, uncertainty, restriction, methodological characteristic, or contextual statement necessary to prevent overinterpretation.

Qualification ≠ Disclaimer

A qualification defines the legitimate meaning of the prediction.

It should not be treated as peripheral legal language detached from the prediction itself.

Material Qualification

A qualification is material where its omission could reasonably change the interpretation, reliance, or decision significance of the prediction.

Material Qualification Omitted ≠ Equivalent Prediction Representation

Qualification Persistence

Material qualifications should remain attached or reliably accessible when a prediction is redistributed.

Prediction Redistribution ≠ Qualification Removal

Prediction Label

A Prediction Label may describe the governed status or nature of a prediction.

Examples may include:

preliminary; governed; conditional; restricted; market-derived;

collectively aggregated; model-generated; expert-generated.

Label ≠ Governance Substitute

A label does not replace underlying governance.

Prediction Status Representation

The lifecycle state of the prediction should remain distinguishable where relevant.

Examples include:

Current

Under Review

Revised

Superseded

Withdrawn

Superseded Prediction ≠ Current Prediction

Withdrawn Prediction ≠ Active Prediction

Interpretation

Interpretation is the meaning assigned to a prediction by a recipient, system, decision process, or downstream application.

PCRS governs conditions under which that interpretation remains consistent with the prediction's governed meaning.

Communication ≠ Interpretation

A prediction may be communicated correctly and still be interpreted incorrectly.

Interpretation ≠ Prediction Formation

The recipient does not recreate the prediction merely by interpreting it.

Interpretation Boundary

An Interpretation Boundary defines what the prediction legitimately supports.

Prediction Supports X ≠ Prediction Supports Every Decision Related to X

Interpretation Scope

A prediction may be appropriate for one decision context but inappropriate for another.

General Availability ≠ Universal Decision Applicability

Intended Purpose

The prediction's intended purpose should remain materially relevant to interpretation and reliance.

Use Beyond Intended Purpose ≠ Automatically Legitimate Use

Purpose Expansion

A prediction produced for one purpose may later be used for another.

Purpose Expansion Requires Governance

Prediction Recontextualization

Recontextualization occurs where a prediction is used in a context different from the one in which it was governed.

Same Prediction + New Context ≠ Same Reliance Meaning by Default

Audience Context

Different audiences may interpret identical predictive representations differently.

Relevant audiences may include:

experts; executives; regulators; public users; automated agents; operators; investors; consumers.

Same Communication ≠ Same Interpretation Across Audiences

Human Interpretation

Human recipients may overread precision, confidence, authority, or certainty.

Machine Interpretation

Machine-readable prediction outputs may be consumed automatically by downstream systems.

Machine Readability ≠ Machine Interpretability

Automated Interpretation

Automated systems should not infer stronger claims than the governed prediction supports.

Machine Consumption ≠ Permission to Remove Context

Prediction Reliance

Prediction Reliance is the degree to which a human, organization, AI system, autonomous agent, or decision process uses a prediction to inform, shape, trigger, constrain, prioritize, or justify action.

Reliance ≠ Mere Observation

A prediction may be viewed without being materially relied upon.

Prediction Use

Prediction Use may range from informational awareness to direct automated action.

Use ≠ Reliance at Equal Intensity

Reliance Intensity

Reliance may occur at different levels.

Examples include:

Informational Reliance

Advisory Reliance

Decision-Support Reliance

High-Consequence Reliance

Automated Operational Reliance

Same Prediction ≠ Same Legitimate Reliance Level in Every Context

Reliance Threshold

A Reliance Threshold defines the minimum governance conditions required before a prediction may legitimately support a specified type or level of reliance.

Availability ≠ Reliance Eligibility

Reliance Eligibility

Reliance Eligibility concerns whether the prediction's governed state sufficiently supports a particular intended use.

Prediction Exists ≠ Prediction Is Reliance- Eligible

Reliance Context

Legitimate reliance depends upon context.

Relevant factors may include:

decision consequence; reversibility; time sensitivity; operational criticality; affected population; automation level; availability of alternatives; uncertainty; feasibility; methodology quality; Prediction Horizon.

Low-Consequence Reliance ≠ High-Consequence Reliance

High-Consequence Reliance

Where a prediction materially influences safety-critical, financial, legal, medical, infrastructure, public-policy, or similarly consequential decisions, stronger governance conditions may be required.

High Probability ≠ Sufficient Basis for High- Consequence Reliance

Automated Reliance

A prediction may directly trigger automated action.

Prediction Output ≠ Automatic Execution Authority

Automated Action Threshold

Where a prediction is used to trigger autonomous or automated action, the relevant threshold should remain explicit.

Threshold Crossing ≠ Certainty

Decision Support

Predictions may support rather than determine decisions.

Prediction Input ≠ Decision

Prediction Recommendation

A prediction may be embedded within a recommendation.

Prediction ≠ Recommendation

A recommendation may involve:

objectives; values; preferences; constraints; risk tolerance; policy.

PCRS does not collapse these into prediction governance.

Reliance Authority

The fact that a prediction is governable does not itself grant authority to act upon it.

Governed Prediction ≠ Decision Authority

Reliance Responsibility

Responsibility for a downstream decision does not automatically transfer to the predictive system merely because the prediction influenced that decision.

Prediction Influence ≠ Decision Responsibility by Default

AGA™ and other applicable accountability architectures govern responsibility.

Overreliance

Overreliance occurs where a prediction is given more decision significance than its governed state legitimately supports.

Overreliance ≠ High Reliance Alone

High reliance may be legitimate where governance conditions support it.

Underreliance

Underreliance may occur where a well-governed prediction is systematically ignored despite legitimate relevance.

PCRS recognizes the concept but does not require reliance.

Governed Prediction ≠ Mandatory Reliance

Automation Bias

Users or systems may treat machine-generated predictions as inherently superior.

AI-Generated Prediction ≠ Superior Prediction by Default

Authority Bias

Predictions from prestigious institutions or experts may receive excessive weight.

Source Prestige ≠ Predictive Certainty

Consensus Bias

Collective agreement may be interpreted as certainty.

Consensus ≠ Certainty

Precision Bias

Precise numbers may appear more reliable than the underlying methodology warrants.

Numerical Precision ≠ Predictive Reliability

Recency Bias

A recently updated prediction may be preferred merely because it is newer.

Newer Prediction ≠ Better Prediction by Default

Reliance Escalation

As prediction reliance increases in consequence or automation, governance requirements should increase proportionally.

Greater Reliance ≠ Same Governance Requirement

Reliance Proportionality

Reliance should remain proportionate to:

prediction governance quality; uncertainty; feasibility; intended purpose; decision consequence; reversibility.

Reliance Proportionality ≠ Prediction Accuracy Guarantee

Prediction Misrepresentation

Misrepresentation occurs where communicated meaning materially exceeds the governed prediction.

Examples include:

probability represented as certainty; conditional prediction represented as unconditional;

collective market signal represented as population belief; limited-scope prediction represented as universal; feasibility-restricted prediction represented as fully achievable.

Prediction Misrepresentation ≠ Prediction Error

A prediction can be communicated incorrectly even if it later proves accurate.

Prediction Exaggeration

Prediction Exaggeration occurs where language strengthens the apparent predictive claim beyond its governed basis.

Stronger Wording ≠ Stronger Prediction

Prediction Minimization

Material limitations should not be buried or weakened so that the prediction appears simpler or stronger.

Visual Representation

Charts, colors, scores, rankings, and dashboards may influence interpretation.

Visual Simplicity ≠ Governance Neutrality

Visual Salience

A prominent headline probability may dominate less visible qualification.

Visible Number + Hidden Qualification ≠ Balanced Prediction Representation

Ranking Representation

Predictions may be ranked.

Higher Rank ≠ Greater Certainty by Default

Risk Category Representation

A prediction may be mapped into categories such as:

Low / Medium / High

Category ≠ Underlying Probability

Narrative Representation

Predictions may be described narratively.

Narrative Confidence ≠ Governed Prediction Confidence

Headline Representation

Headlines may materially compress prediction meaning.

Headline Accuracy ≠ Full Representation Sufficiency

Public Communication

Public communication may require stronger clarity because recipients may lack access to technical context.

Public Availability ≠ Unlimited Interpretive Freedom

Internal Communication

Internal predictions also require governance.

Internal Use ≠ Governance Exemption

API Communication

Machine-readable interfaces may distribute predictions at scale.

API Output ≠ Context-Free Prediction

Third-Party Redistribution

Predictions may be republished by third parties.

Redistribution ≠ Permission to Alter Governed Meaning

Derived Representation

A third party may transform a prediction into another presentation format.

Derived Representation ≠ New Prediction by Default

But material changes in meaning may require separate governance.

Prediction Citation

Where a prediction is externally referenced, sufficient identification should remain possible.

Prediction Reference ≠ Prediction Provenance

PRCS later governs complete historical record and continuity.

Reliance Traceability

Where reliance is material, it may be useful or necessary to preserve:

which prediction was relied upon; which version; which qualifications; which lifecycle state; which decision context.

Reliance Traceability ≠ Decision Accountability

Traceability supports accountability but does not determine responsibility.

Reliance Dependency

A decision or system may depend heavily upon one prediction.

Single Prediction Dependency ≠ Diversified Decision Basis

Prediction Portfolio Reliance

Multiple predictions may support one decision.

Multiple Predictions ≠ Independent Decision Basis

Reliance Conflict

Different predictions may support conflicting actions.

Prediction Conflict ≠ Automatic Decision Rule

Escalation Condition

A prediction may require escalation when:

governance qualifications are material; uncertainty is high; feasibility is restricted; prediction state is under review; reliance consequence is high; predictions conflict materially.

Escalation ≠ Prediction Invalidity

Prediction Withdrawal Communication

If a prediction is withdrawn, downstream recipients should not continue treating it as current.

Withdrawal ≠ Historical Deletion

Prediction Supersession Communication

A superseded prediction should remain distinguishable from its successor.

Superseded ≠ Deleted

Revision Communication

When a prediction is revised, the new representation should not imply that the prior prediction never existed.

Revision ≠ Historical Replacement

Reliance on Historical Prediction

A historical prediction may remain relevant for performance assessment or decision reconstruction.

Historical Prediction ≠ Current Decision Basis by Default

Prediction Communication State

PCRS may recognize communication states such as:

Communication Ready

Communication Qualified

Communication Restricted

Communication Under Review

Communication Not Supported

Unable to Determine

Communication Ready

The prediction may be communicated within its governed scope without additional material qualification beyond its standard context.

Communication Qualified

Material qualification must accompany communication.

Communication Restricted

The prediction may be communicated only within defined contexts, audiences, or purposes.

Communication Under Review

Material governance conditions are unresolved or changing.

Communication Not Supported

The proposed communication would materially misrepresent the prediction.

Unable to Determine

Available information is insufficient to establish legitimate communication status.

Unable to Determine ≠ Communication Ready

Reliance State

PCRS may recognize reliance states such as:

Reliance Supported

Reliance Conditionally Supported

Reliance Restricted

Reliance Escalation Required

Reliance Not Supported

Unable to Determine

Reliance Supported

The governed prediction is sufficient for the defined reliance context.

Reliance Conditionally Supported

Reliance is legitimate only under explicit conditions.

Reliance Restricted

Only limited forms or levels of reliance are legitimate.

Reliance Escalation Required

The reliance context requires additional human, institutional, methodological, or governance review.

Reliance Not Supported

The prediction should not support the proposed reliance context.

Unable to Determine ≠ Reliance Supported

Communication and Reliance Are Distinct

A prediction may be legitimate to communicate while not legitimate for a particular reliance context.

Communicable ≠ Reliance-Eligible

This is a central PCRS distinction.

Publicly Available ≠ Operationally Actionable

Prediction Influence

Communication may cause a prediction to influence decisions or Operational Reality.

Communication Influence ≠ Predictive Accuracy

Prediction Reflexivity

A prediction may alter the reality it predicts after communication.

The relationship may become:

Prediction → Communication → Reliance → Action → Changed Operational Reality

Prediction Observation ≠ Prediction Influence

Prediction Influence ≠ Outcome Control

Prediction Influence ≠ Predictive Accuracy

Where material, this changing relationship should remain visible for later monitoring under PMRS.

Communication Change

The prediction itself may remain unchanged while its communication changes.

Communication Change ≠ Prediction Revision

Reliance Change

Downstream reliance may increase or decrease without altering the underlying prediction.

Reliance Change ≠ Prediction Change

Context Change

A prediction that was legitimately relied upon in one context may cease to be appropriate if circumstances materially change.

Historical Reliance Eligibility ≠ Current Reliance Eligibility

Relationship to POPS

POPS defines Prediction Object, purpose, horizon, and boundary.

PCRS preserves those characteristics through communication and reliance.

Relationship to PMES

PMES governs Prediction Methodology.

PCRS prevents communication from obscuring methodological characteristics material to interpretation.

Relationship to PBAS

PBAS governs Prediction Basis.

PCRS preserves relevant basis context without re-governing the basis.

Relationship to PAS

PAS governs Predictive Assumptions.

PCRS ensures material assumptions are not transformed into hidden conditions of reliance.

Relationship to PFOS

PFOS forms the specific Governed Prediction.

PCRS communicates that prediction without redefining it.

Communication ≠ Prediction Reformation

Relationship to PPUS

PPUS governs Probability & Uncertainty.

PCRS preserves their legitimate meaning during communication and interpretation.

Communication ≠ Probability Reinterpretation

Relationship to PFES

PFES governs Prediction Feasibility.

PCRS ensures feasibility states and restrictions are not lost in downstream representation.

Probability ≠ Feasibility

Relationship to CPGS

Where Collective Prediction applies, PCRS receives the governed collective representation produced through CPGS.

It does not re-establish collective legitimacy.

Collective Representation ≠ Communication Authorization by Default

Relationship to PMRS

PMRS governs subsequent monitoring and revision.

PCRS communication or reliance conditions may generate triggers requiring later review.

Communication Issue ≠ Prediction Revision by Default

Relationship to POFPS

POFPS later governs Prediction Outcome & Performance.

PCRS does not determine whether the prediction was correct.

Communication Quality ≠ Predictive Performance

Relationship to PRCS

PRCS governs Prediction Record & Historical Continuity.

PRCS should preserve communication and reliance context where necessary for later reconstruction.

Relationship to ORA™

ORA™ governs Operational Reality.

PRCS does not determine the reality upon which communication or reliance depends.

Communication ≠ Operational Reality Determination

Relationship to AGA™

AGA™ governs accountability.

PRCS may preserve reliance context relevant to accountability without assigning responsibility itself.

Reliance Traceability ≠ Accountability Determination

Relationship to AIG® and ASGA™

Where AI or autonomous systems interpret or act upon predictions, AIG® and ASGA™ may govern behavioral, execution, authority, escalation, and autonomous-system conditions.

PRCS governs the prediction's communicative and reliance legitimacy.

Prediction Output ≠ Autonomous Action Authority

Governance Requirements

PRCS requires that:

1. prediction communication preserve the governed Prediction Object;
2. prediction communication preserve the applicable outcome definition;
3. Prediction Horizon remain available where material;
4. Predictive Boundary remain available where material;
5. communication not broaden the governed prediction by default;
6. simplified communication not remove material methodological meaning;
7. material Prediction Basis context remain accessible where relevant to reliance;
8. material assumptions remain visible or accessible;
9. probability remain distinguishable from certainty;
10. probability remain distinguishable from confidence;
11. confidence remain distinguishable from certainty;
12. uncertainty not be removed merely for communicative simplicity;
13. point estimates not replace material ranges without qualification;
14. conditional predictions remain explicitly conditional where material;
15. Feasibility remain distinguishable from Probability;
16. conditional Feasibility remain distinguishable from unqualified Feasibility;
17. collective prediction qualifications remain preservable;
18. collective prediction not be represented as Population Belief by default;
19. material Prediction Qualifications remain attached or reliably accessible;
20. qualification remain distinguishable from generic disclaimer;
21. redistribution not remove material qualifications;
22. prediction labels remain distinguishable from governance itself;
23. lifecycle state remain explicit where material;
24. superseded predictions remain distinguishable from current predictions;
25. withdrawn predictions remain distinguishable from active predictions;
26. Communication remain distinguishable from Interpretation;
27. Interpretation remain bounded by the governed meaning of the prediction;
28. Intended Purpose remain relevant to reliance;
29. purpose expansion remain governable;
30. recontextualization remain identifiable;
31. same prediction in a new context not automatically retain the same reliance meaning;
32. audience differences remain governable where material;
33. Machine Readability remain distinguishable from Machine Interpretability;
- 34.

automated systems not infer stronger claims than the prediction supports; 35. Prediction Reliance remain distinguishable from mere observation;

36. different reliance intensities remain distinguishable; 37. Reliance Thresholds remain explicit where used; 38. prediction availability remain distinguishable from reliance eligibility; 39. reliance context remain explicit where material; 40. high-consequence reliance require proportionate governance; 41. high probability not automatically establish sufficient basis for high-consequence reliance; 42. automated prediction output not automatically authorize automated execution; 43. automated action thresholds remain identifiable; 44. Prediction Input remain distinguishable from Decision; 45. Prediction remain distinguishable from Recommendation; 46. Governed Prediction remain distinguishable from Decision Authority; 47. Prediction Influence remain distinguishable from Decision Responsibility; 48. Overreliance remain governable; 49. high reliance not automatically constitute Overreliance; 50. Governed Prediction not require mandatory reliance; 51. Automation Bias remain identifiable where material; 52. source prestige not be treated as predictive certainty; 53. Consensus remain distinguishable from certainty; 54. Numerical Precision remain distinguishable from Predictive Reliability; 55. newer prediction not automatically be treated as better prediction; 56. reliance governance increase proportionally where consequence or automation increases; 57. Prediction Misrepresentation remain distinguishable from Prediction Error; 58. stronger wording not create stronger prediction legitimacy; 59. visual representation not distort material predictive meaning; 60. material qualifications not be visually suppressed; 61. rankings remain distinguishable from certainty; 62. categories remain distinguishable from underlying probabilities; 63. narrative confidence remain distinguishable from governed prediction confidence; 64. headline compression not remove material meaning; 65. public communication not be treated as governance exemption; 66. internal use not be treated as governance exemption; 67. machine-readable API output preserve sufficient predictive context; 68. redistribution not authorize alteration of governed meaning; 69. derived representations remain governable where they materially change meaning; 70. material reliance remain traceable where required; 71. Reliance Traceability remain distinguishable from Accountability Determination; 72. Single Prediction Dependency remain identifiable where material; 73. multiple predictions not automatically create an independent decision basis; 74. Prediction Conflict not automatically determine decision rules; 75. escalation remain available where reliance context requires additional review; 76. escalation remain distinguishable from prediction invalidity; 77. withdrawal communication prevent withdrawn predictions from being treated as current; 78. supersession remain historically reconstructable; 79. revision not erase earlier prediction representation; 80. historical prediction remain distinguishable from current decision basis; 81. communication states remain explicit where applicable; 82. Unable to Determine not be treated as Communication Ready; 83. reliance states remain explicit where applicable; 84. Unable to Determine not be treated as Reliance Supported; 85. Communicable remain distinguishable from Reliance-Eligible; 86. public availability remain distinguishable from operational actionability; 87. prediction influence remain distinguishable from predictive accuracy; 88. reflexive effects created by prediction communication remain preservable where material; 89. communication change remain distinguishable from prediction revision; 90. reliance change remain distinguishable from prediction change; 91. historical Reliance Eligibility remain distinguishable from current Reliance Eligibility; 92. Prediction Communication & Reliance remain distinct from Operational Reality determination; 93. Prediction Communication & Reliance remain distinct from prediction monitoring and revision; 94. Prediction Communication & Reliance remain distinct from outcome and performance determination; 95. Prediction Communication & Reliance remain distinct from accountability determination.

Governance Logic

PCRS applies the following architecture-level governance logic:

Governed Prediction

Applicable Collective Prediction Representation where relevant

Prediction Methodology Context

Prediction Basis / Assumption Context

Probability & Uncertainty State

Prediction Feasibility State

Purpose / Horizon / Boundary

↓

Prediction Representation Defined

↓

Prediction Object / Outcome Meaning Preserved

↓

Prediction Horizon / Boundary Preserved

↓

Material Methodological Context Preserved

↓

Probability / Uncertainty / Confidence Meaning Preserved

↓

Feasibility Conditions Preserved

↓

Material Qualifications Identified

↓

Collective Qualifications Preserved where applicable

↓

Communication Context Established

↓

Audience / System Interpretation Context Assessed

↓

Interpretation Boundary Established

↓

Intended Purpose / Recontextualization Assessed

↓

Proposed Reliance Context Identified

↓

Reliance Intensity / Consequence Assessed

↓

Reliance Eligibility Determined

↓

Overreliance / Misrepresentation Risk Assessed

↓

Escalation Conditions Established where necessary

↓

Communication State Established

↓

Reliance State Established

↓

Governed Prediction Communication & Reliance State

↓

Prediction Monitoring & Revision

Where legitimate communication or reliance cannot be established:

Prediction Communication & Reliance Governance Gap → Qualification / Context Clarification / Representation Restriction / Reliance Restriction / Escalation / Communication Not Supported / Reliance Not Supported / Unable to Determine

Governance Outputs

PCRS may produce:

Governed Prediction Representation; Governed Interpretation Boundary; Governed Reliance State; Prediction Communication State; Prediction Qualification; Material Qualification Record; Prediction Label; Prediction Status Representation; Methodology Context Reference; Prediction Basis Context Reference; Assumption Context Reference; Probability Representation; Uncertainty Representation; Feasibility Representation;

Collective Prediction Qualification; Interpretation Boundary; Interpretation Scope; Intended Purpose Reference; Recontextualization Record; Audience Context; Machine Interpretation Context; Reliance Context; Reliance Intensity; Reliance Threshold; Reliance Eligibility State; High-Consequence Reliance Qualification; Automated Reliance Condition; Automated Action Threshold; Overreliance Risk; Prediction Misrepresentation Record; Prediction Exaggeration Record; Visual Representation Qualification; Redistribution Qualification; Reliance Traceability Record; Single Prediction Dependency Record; Prediction Conflict Record; Escalation Condition; Communication Restriction; Reliance Restriction; Communication Not Supported State; Reliance Not Supported State; Prediction Communication & Reliance Governance Gap; historical communication state; historical reliance state.

The primary governed transition is:

Governed Prediction → Governed Representation → Governed Interpretation → Governed Reliance

which proceeds into:

Prediction Monitoring & Revision.

Critical Distinctions

A Prediction Must Not Become Stronger in Communication Than It Is in Methodology

Communication ≠ Neutral Transmission

Representation ≠ Underlying Prediction

Communication Compression ≠ Permission to Remove Material Meaning

Communication ≠ Permission to Broaden the Prediction Object

Simplified Language ≠ Broader Outcome Claim

Probability Without Horizon ≠ Complete Predictive Meaning

Prediction Without Boundary Context ≠ Universally Applicable Prediction

Simplified Communication ≠ Methodology-Free Communication

Hidden Material Assumption ≠ Legitimate Reliance Condition

Probability ≠ Certainty

Probability ≠ Confidence

Confidence ≠ Certainty

High Probability ≠ Guaranteed Outcome

Uncertainty Omission ≠ Uncertainty Removal

Point Estimate ≠ Complete Distribution by Default

Conditional Prediction ≠ Unconditional Prediction

Feasible ≠ Probable

Probable ≠ Feasible

Conditionally Feasible ≠ Unconditionally Feasible

Collective Prediction ≠ Population Belief by Default

Consensus ≠ Independent Consensus by Default

Market-Implied Probability ≠ Population Belief

Qualification ≠ Disclaimer

Material Qualification Omitted ≠ Equivalent Prediction Representation

Prediction Redistribution ≠ Qualification Removal

Label ≠ Governance Substitute

Superseded Prediction ≠ Current Prediction

Withdrawn Prediction ≠ Active Prediction

Communication ≠ Interpretation

Prediction Supports X ≠ Prediction Supports Every Decision Related to X

General Availability ≠ Universal Decision Applicability

Use Beyond Intended Purpose ≠ Automatically Legitimate Use

Same Prediction + New Context ≠ Same Reliance Meaning by Default

Same Communication ≠ Same Interpretation Across Audiences

Machine Readability ≠ Machine Interpretability

Machine Consumption ≠ Permission to Remove Context

Reliance ≠ Mere Observation

Use ≠ Reliance at Equal Intensity

Same Prediction ≠ Same Legitimate Reliance Level in Every Context

Availability ≠ Reliance Eligibility

Prediction Exists ≠ Prediction Is Reliance-Eligible

Low-Consequence Reliance ≠ High-Consequence Reliance

High Probability ≠ Sufficient Basis for High-Consequence Reliance

Prediction Output ≠ Automatic Execution Authority

Threshold Crossing ≠ Certainty

Prediction Input ≠ Decision

Prediction ≠ Recommendation

Governed Prediction ≠ Decision Authority

Prediction Influence ≠ Decision Responsibility by Default

Overreliance ≠ High Reliance Alone

Governed Prediction ≠ Mandatory Reliance

AI-Generated Prediction ≠ Superior Prediction by Default

Source Prestige ≠ Predictive Certainty

Consensus ≠ Certainty

Numerical Precision ≠ Predictive Reliability

Newer Prediction ≠ Better Prediction by Default

Greater Reliance ≠ Same Governance Requirement

Prediction Misrepresentation ≠ Prediction Error

Stronger Wording ≠ Stronger Prediction

Visual Simplicity ≠ Governance Neutrality

Visible Number + Hidden Qualification ≠ Balanced Prediction Representation

Higher Rank ≠ Greater Certainty by Default

Category ≠ Underlying Probability

Narrative Confidence ≠ Governed Prediction Confidence

Headline Accuracy ≠ Full Representation Sufficiency

Public Availability ≠ Unlimited Interpretive Freedom

Internal Use ≠ Governance Exemption

API Output ≠ Context-Free Prediction

Redistribution ≠ Permission to Alter Governed Meaning

Derived Representation ≠ New Prediction by Default

Reliance Traceability ≠ Decision Accountability

Single Prediction Dependency ≠ Diversified Decision Basis

Multiple Predictions ≠ Independent Decision Basis

Prediction Conflict ≠ Automatic Decision Rule

Escalation ≠ Prediction Invalidity

Withdrawal ≠ Historical Deletion

Superseded ≠ Deleted

Revision ≠ Historical Replacement

Historical Prediction ≠ Current Decision Basis by Default

Unable to Determine ≠ Communication Ready
Unable to Determine ≠ Reliance Supported
Communicable ≠ Reliance-Eligible
Publicly Available ≠ Operationally Actionable
Communication Influence ≠ Predictive Accuracy
Prediction Observation ≠ Prediction Influence
Prediction Influence ≠ Outcome Control
Prediction Influence ≠ Predictive Accuracy
Communication Change ≠ Prediction Revision
Reliance Change ≠ Prediction Change
Historical Reliance Eligibility ≠ Current Reliance Eligibility
Communication ≠ Prediction Reformation
Communication ≠ Probability Reinterpretation
Collective Representation ≠ Communication Authorization by Default
Communication Issue ≠ Prediction Revision by Default
Communication Quality ≠ Predictive Performance
Communication ≠ Operational Reality Determination
Reliance Traceability ≠ Accountability Determination
Prediction Output ≠ Autonomous Action Authority

Canonical Boundary

PCRS governs how a Governed Prediction may be represented, communicated, interpreted, distributed, contextualized, qualified, and relied upon without exceeding what its methodology, Prediction Basis, assumptions, Probability & Uncertainty, feasibility, intended purpose, Prediction Horizon, Predictive Boundary, collective governance state, and lifecycle status legitimately support. It governs Prediction Representation, material qualifications, interpretation boundaries, intended-purpose alignment, recontextualization, audience and machine interpretation, Reliance Eligibility, reliance intensity, high-consequence and automated reliance, overreliance, misrepresentation, escalation conditions, redistribution, communication states, reliance states, and material communication or reliance traceability. It does not form or revise predictions, determine Prediction Basis, govern Predictive Assumptions, calculate Probability & Uncertainty, determine Feasibility, establish Collective Prediction legitimacy, determine Operational Reality, assign decision authority or accountability, determine outcomes, or assess predictive performance.

PCRS governs:

what a prediction may legitimately communicate and how far that prediction may legitimately be relied upon.

It does not determine:

whether the predicted future will occur or what decision a recipient must ultimately make.

Canonical Closing Statement

A prediction can remain methodologically unchanged while becoming dangerously stronger through the way it is presented, interpreted, or acted upon.

PCRS preserves the boundary between what a prediction actually establishes and what humans, organizations, AI systems, and autonomous systems are entitled to infer or do because of it.

A governed prediction must carry its limits all the way from prediction to reliance.

Nahlad

Prediction Communication & Reliance Standard

Architecture:

PGA™ — Prediction Governance Architecture

Category:

Governance & Enforcement

Subcategory:

Prediction Governance

Canonical Definition: The Prediction Communication & Reliance Standard governs how a Governed Prediction may be represented, communicated, interpreted, contextualized, and relied upon without exceeding what its methodology, Prediction Basis, assumptions, Probability & Uncertainty, feasibility, intended purpose, Prediction Horizon, Predictive Boundary, and applicable governance qualifications legitimately support.

Governed Space:

Prediction Communication & Reliance

Core Question: How may a prediction be communicated, interpreted, and relied upon without exceeding what its methodology, uncertainty, feasibility, intended purpose, and governed conditions legitimately support?

Communicable ≠ Reliance-Eligible

A prediction must not become stronger in communication than it is in methodology.
